

## Bio

Dr. Rwitajit Majumdar is a program specific researcher at the Learning and Educational Technologies (LET) Research Lab at the Academic Center for Computing and Media Studies of Kyoto University. He has previously conducted workshops in LAK, T4E, ICCE and LaTICE conferences.

## Workshop brief:

In the global context the multi-disciplinary research area on Learning Analytics have provided methods to understand the data logged during teaching-learning activities and potentially enrich such experiences. This workshop introduces an implemented learning analytics infrastructure which is adopted by instructors across three universities in Japan and Taiwan. It includes BookRoll (a digital content delivery system) and LAView (a learning analytics dashboard). After T4E 2018, we offered the TEEL platform to the university teachers across higher education institutes teachers in India. Of the invited 144 teachers, 22 teachers offered their semester long course on the platform. This workshop is the second workshop in the series for the teachers and researchers in India who attend T4E 2019. We would include voices from field session where the earlier teachers who used the TEEL platform would share their experience and demonstrate the usefulness of the components that they used.
